

ThermaCote®

Concrete Protecting Weather Barrier Coating

MasterSpec®

**Easily installs with an
airless sprayer system.**

Thermacote® is a single component, spray-applied, waterborne acrylic coating for improving corrosion protection. By sealing substrates from air and water intrusion and increasing U-value/resistance values of interior/exterior surfaces, Thermacote® is a lightweight solution that helps to maintain the structural integrity of concrete walls, beams, ceilings, and roofs, while increasing the sustainability of the substrate.
